

Local Production and Consumption of Metal Part

Phase I Become a platformer of metal 3d-printing, by releasing innovative printers, based on our own technology
(2023~, Productivity 500x, Cost 1/5)

Phase II Direct production of metal powder, the raw material for the above printer, from metal ore
(2025~, Carbon-free reduction)

We will revolutionize manufacturing in the entire universe, by creating a world where metal parts can be directly manufactured from local metal ore.
