

3DC Inc.

3DC is a startup company founded by Tohoku University, mainly focused on revolutionizing the development of next-generation batteries, capacitors, and fuel cells. Our flagship product is a new type of carbon material - Graphene Mesosponge (GMS). This product will achieve long battery life and high capacity, and accelerate the evolution of batteries. 3DC is currently working with several domestic and international companies in various fields, such as battery, machinery and automobile manufacturers, to bring their products into practical use as soon as possible.
