

Deep & Light Technology Inc.

We offer a variety of analysis services for examining food structures using X-ray CT systems. Our support extends to customers in their pursuit of innovation in New Food or 3D Food development. Additionally, we are engaged in the independent development of 3D Food and Food ink. Our scope isn't limited to food-related materials; we also specialize in soft materials such as biological cells, tissues, and organs, both plant and animal, serving scientific and pre-clinical needs. Moreover, we are equipped to address complex customer requirements through various methods, including MRI and other modalities.
